Yaounde, 10 SEPT 2026

PRESS RELEASE

The Minister of Public Health, **Dr. MANAOUA Malachie**, informs the general public, and stakeholders interested in health data in particular, that two major tools are now available.

These are:

1. The public dashboard of health statistics in Cameroon, which can be accessed at <https://dashboard.minsante.cm>
2. The first annual report on mortality and certified causes of death in hospitals in Cameroon for the year 2025.

The first website mentioned above presents statistics based on key indicators organised according to the six health pillars established by the World Health Organization (WHO), at both the national and subnational levels.

The second report, accessible and downloadable in PDF format at <https://cdnss-minsante.cm/rapports-thematiques> indicates the causes of death among the Cameroonian population by sex and age group.

Furthermore, these two entirely new platforms are valuable decision-making tools at all levels of the decision-making chain for strengthening the health system and improving the well-being of the population.

On behalf of the Government, the Minister of Public Health assures the public of the continuous and certified availability of high-quality health information to ensure transparency, accountability, and efficiency in the health sector, particularly in light of the progressive implementation of Universal Health Coverage (UHC) in Cameroon. /-

Dr. Manouada Malachie
